

THE POWER OF CELERANT IN THE PALM OF YOUR HAND

Over the last number of years, the retail landscape has undergone a major technological shift as mobile applications have become commonplace. Retailers who arm their staff with mobile applications realize great benefits in productivity and customer service along with reductions in hardware and upgrade costs.

Celerant enables your staff to perform inventory tasks and other back-office functions on mobile, while connected to the internet. Whether in trucks, store locations or warehouses, you can scan, count, manage and lookup your inventory. With Celerant's mobile and stand-alone applications, you will improve operational efficiency by eliminating the need for manual entry of count sheets. Your employees will be able to perform essential functions anywhere, reducing errors and improving customer service.

STRATUS MOBILE INVENTORY (SMI)

Stratus Mobile Inventory (SMI) is a web-based application which runs on any iOS mobile device, in conjunction with a Linea-Pro sled or other Bluetooth scanner. SMI enables your employees to create documents and perform essential back-office and warehouse tasks on-the-fly. Tasks such as transfers, receiving, picking and packing are communicated directly to your main Stratus database, in real-time. That way, inventory is immediately reflected across all channels including POS, back office and eCommerce.

MOBILE INVENTORY APP FOR iOS

Celerant Mobile Inventory for iOS is an app that can be purchased and easily downloaded from the Apple App Store to simplify your inventory processes. This is a perfect option for stores seeking a light-weight, cost-effective device to complete physical inventory and smaller cycle counts, and perform other back-office functions. Add a Linea-Pro Sled to transform your iOS device into a barcode scanner, validating barcodes and making inventory tasks faster and more accurate.

“By incorporating Celerant Mobile Inventory for iOS into our transfer and inventory processes, we have been able to cut down substantially on the time previously spent on these tasks. Also, iPod and Linea-Pro devices have proven to be a robust combination that has withstood the rigors of the retail environment.”

MOBILE INVENTORY APP FOR PDT

Celerant offers a heavy-duty mobile tool for retailers with larger amounts of inventory and turnover. The Skorpio X4 Portable Data Terminal (PDT) along with our software enables you to perform physical inventory and other back-office tasks in motion. The PDT collects data and generates .txt files for export using Celerant's Data Collector. Complete physical inventory, enter POs, receive and transfer products, change style attributes, enter prices, process sales orders and more - while on-the-go.
